

Mobile App Wireframing

Design a simple low-fidelity wireframe for a mobile application that focuses on structure, layout, and user flow rather than visual design.

Objectives

- ❖ Identify user requirements through basic research.

1. User Research

Problem Statement

Many students experience stress, anxiety, academic pressure, and emotional challenges during their higher education journey. Due to stigma and limited access to support, they often struggle to seek professional help when needed.

Target Users

- College and university students (18–25 years)
- Students facing academic stress and emotional challenges
- Students seeking accessible mental health support

User Needs

- Monitor daily mood and emotional well-being
- Access professional counseling services
- Receive immediate emergency support
- Track mental wellness progress
- Access mental health resources in one place

- ❖ Develop a user persona representing the target audience.

2. User Persona

Name: Aarav Sharma

Age: 21 Years

Occupation: BCA Student

Goals

- Manage academic and personal stress
- Improve mental well-being
- Access counseling support conveniently
- Track emotional health regularly

Pain Points

- Hesitates to discuss mental health concerns
- Difficulty balancing studies and personal life
- Limited awareness of available support services
- Needs quick access to emergency assistance during stressful situations

USER PERSONA

Aarav Sharma

 **Age:** 21 Years
 **Occupation:** BCA Student
 **Location:** Jaipur, Rajasthan
 **Education:** Bachelor of Computer Applications

About Aarav

Aarav is a computer applications student who is passionate about technology and wants to build a successful career. He juggles college assignments, practicals, exams, and personal responsibilities. He often feels overwhelmed by academic pressure and looks for guidance and support to maintain his mental well-being.

 "I want to stay strong and focused, but sometimes I just need someone to talk to and guide me."

 *Taking care of my mental health is as important as excelling in my studies."*

 **GOALS**

- ✓ Manage academic and personal stress
- ✓ Improve mental well-being
- ✓ Access counseling support conveniently
- ✓ Track emotional health regularly

 **PAIN POINTS**

- ✗ Hesitates to discuss mental health concerns
- ✗ Difficulty balancing studies and personal life
- ✗ Limited awareness of available support services
- ✗ Needs quick access to emergency assistance during stressful situations

 **BEHAVIOR**

- Spends long hours on studies and projects
- Prefers solutions that are easy to access and confidential
- Often feels stressed and overthink situations
- Wants quick support during anxiety or low mood

 **TECHNOLOGY USE**

- Uses smartphone extensively
- Comfortable with mobile apps and digital platforms
- Active on social media and online communities
- Prefers apps that are simple, intuitive and private

 **NEEDS FROM THE APP**

- Mood tracking to understand emotional well-being
- Easy access to professional counselors
- Reliable emergency help and crisis support
- Resources and tools for stress management and well-being

 **PERSONA SUMMARY**

Aarav represents students who face academic stress, emotional challenges, and hesitation in seeking help. He needs a safe, accessible, and confidential platform that supports his mental well-being and offers guidance whenever he needs it.

- ❖ Create a clear user flow to map the user journey.

3. User Flow Chart

Based on my given wireframe screens (Home → Mood Activity → Counselor → Emergency → Profile), here's a clear User Flow Chart for MINDCARE App project:

❖ **Design low-fidelity wireframes using Figma or Adobe XD.**

4. Wireframe Features Overview

1. Home Screen

Provides quick access to Mood Tracker, Resources, Counselor Booking, and Emergency Help while displaying wellness activity.

2. Mood Activity Screen

Allows students to record their daily mood and add notes about their feelings.

Counselor Screen

Enables students to browse available counselors and book counseling sessions.

3. Emergency Screen

Provides instant access to emergency services, campus counselors, crisis helplines, and text support.

4. Profile Screen

Displays user information, mental wellness progress, and account settings.

5. Expected Outcome

The application aims to provide a safe, accessible, and user-friendly platform that supports students' mental health through mood tracking, professional counseling, emergency assistance, and wellness monitoring.

Home Screen

Mood Activity

Counselor Screen

Emergency Screen

Profile Screen

- ❖ **Document the design thinking process from research to prototype.**

5. Design Thinking Process

1. Empathize

Conduct research to understand students' mental health concerns and challenges.

Define: Students need a safe, accessible, and confidential platform for psychological support.

2. Ideate

Brainstorm features such as:

- Mood tracking
- Mental health resources
- Online counseling
- Emergency support
- Anonymous community support

3. Prototype

4. Create low-fidelity wireframes in Figma.

5. Test

6. Gather feedback from students and improve usability.
