

Interactive Prototype Creation – Dating App UI

Objective

Build a clickable prototype of a dating application to simulate real user interactions and demonstrate the complete user journey from onboarding to finding and matching with potential partners.

Key Features

1. Converted Wireframes into an Interactive Prototype

- Designed low-fidelity wireframes and transformed them into a fully interactive prototype using **Figma**.
- Connected all major screens using prototype links to create a seamless user flow.

2. Added Animations, Transitions, and Navigation

- Applied smooth **Smart Animate** transitions between screens.
- Enabled navigation through key app sections, including:
 - Splash Screen
 - Login / Sign Up
 - Profile Setup
 - Home (Swipe Cards)
 - Match Screen
 - Chat Screen
 - User Profile
 - Settings
- Used interactive buttons, swipe gestures, and back navigation for a realistic app experience.

3. Conducted Quick User Testing

- Shared the clickable prototype with users to observe their interactions.
- Evaluated:
 - Ease of navigation
 - Button visibility
 - Screen flow
 - Overall user experience
- Collected feedback on usability, clarity, and visual appeal.

4. Gathered Feedback and Refined the Design

- Improved button placement for better accessibility.

- Enhanced spacing and alignment for a cleaner interface.
- Increased text readability and visual hierarchy.
- Refined navigation flow to reduce user confusion.
- Updated transitions for a smoother and more engaging experience.

Expected Outcome

- Developed a fully interactive prototype that demonstrates the core functionality of the dating application.
- Successfully simulated real user interactions, including navigation, profile browsing, matching, and messaging.
- Improved the overall user experience through usability testing and iterative design refinements.
- Gained practical experience in presenting, testing, and validating interactive UI/UX designs using Figma.

MY Figma View:

DATING APP

INTERACTIVE PROTOTYPE

A modern dating app prototype designed to connect people, spark conversations, and build meaningful relationships.

Connect

Find compatible people around you

Match

Like, match and start a conversation

Chat

Real-time messaging made easy

PROTOTYPE FLOW

KEY FEATURES

- ✓ **User Authentication**
Easy sign up / login with phone number or social accounts.
- ✓ **Discover & Match**
Explore profiles and match with people you like.
- ✓ **Profile & Interests**
View detailed profiles with interests, photos, and personal info.
- ✓ **Real-time Chat**
Instant messaging with matches for seamless communication.

INTERACTIONS & ANIMATIONS

- ✓ **Smooth screen transitions**
Smart Animate used for seamless navigation between screens.
- ✓ **Interactive elements**
Buttons, cards, and icons are fully clickable and responsive.
- ✓ **Gesture simulation**
Swipe-like experience for liking, exploring, and navigating profiles.
- ✓ **Micro-interactions**
Subtle animations for likes, matches, and messages to enhance UX.

OUTCOME

The interactive prototype simulates a real user journey—from onboarding to matching and chatting—providing a seamless and engaging experience.

- ✓ Improved user flow and navigation through testing and feedback.
- ✓ Enhanced visual design and interaction quality.
- ✓ Better engagement with intuitive features and smooth transitions.
- ✓ Validated design decisions with user testing and iteration.
